Raster drawings vs Vector Drawings : F.a.q. detail

athematically as a series of dots joined by lines. Graphic elements in a vector file are called object. Each object is an autonomous entity provided with properties such as color, shape, contour, dimensions and position on the screen, included in its definition. Since every object is an autonomous entity, the user can move it and change its properties at will, while still retaining its clarity and definition and without influencing any other objects present in the illustration. When raster images
